

Jobsy Johnson

AI Engineer | Software Developer | Applied ML

📍 Stockholm, Sweden 📞 +46 764 403 008 ✉ jobsyjohnson@hotmail.com

🌐 LinkedIn 🐙 GitHub 🌐 Portfolio

Profile

AI Engineer and Software Developer with 6+ years of professional experience building enterprise software and applied AI solutions. Recently completed a Master's degree in Artificial Intelligence at Jönköping University, with hands-on experience in computer vision, deep learning, image embeddings, visual retrieval, NLP, and machine learning. Experienced in designing and developing end-to-end AI and software systems, from data preparation and model development to API integration and web application delivery. Strong software engineering background in C#/.NET, Python, SQL Server, React, FastAPI, and Azure, with experience developing production-oriented applications, AI pipelines, and data-driven solutions. Particularly interested in applying AI and modern machine-learning techniques to solve practical industrial and business problems.

Skills

Programming	Python, C#, SQL, JavaScript, ASP.NET, React, HTML/CSS, TypeScript
AI / ML	PyTorch, TensorFlow, Keras, Hugging Face, Scikit-Learn, XGBoost
Computer Vision	OpenCV, DINOv2, CLIP, FAISS, ZXing-cpp, Albumentations, Image Retrieval, Transfer Learning
NLP / GenAI	NLP pipelines, Transformer models, LLMs, Generative AI
Backend	FastAPI, Flask, ASP.NET, .NET
Databases	SQL Server, MySQL
Data / Libraries	NumPy, Pandas, Matplotlib, Seaborn, PyMuPDF, KNIME
Cloud / DevOps	Azure, Git, CI/CD

Work Experience

AI Intern

Jun 2026 – Present

Elajo AB, Stockholm, Sweden

- Development of the AI-assisted product identification solution toward internal deployment and production use.
- Maintaining and improving the application using Git and GitHub for version control and collaborative software development.

Technologies: C#/.NET, Python, React, FastAPI, ERP API, Azure, Git, GitHub, DINOv2, CLIP, FAISS

Master's Thesis Student

Jan 2026 – Jun 2026

Elajo AB, Stockholm, Sweden

- Developed an AI-assisted product identification system for industrial warranty claim management using product images.
- Built a visual retrieval pipeline to match real-world product photographs with catalogue products using image embeddings.
- Developed a hybrid barcode and image-based identification workflow to support automated product identification and warranty claim processing.
- Integrated the AI pipeline into a web application for product identification and warranty claim form completion.

Technologies: Python, PyTorch, DINOv2-Large, CLIP, FAISS, ZXing-cpp, Albumentations, React, FastAPI, SQL Server

AI Research Intern

Oct 2025 – Dec 2025

Jönköping University, Sweden

- Developed NLP pipelines for automatically extracting structured information from research literature.

- Built interactive dashboards for reviewing and analysing extracted research data.

Technologies: Python, NLP, Flask, Pandas

Software Developer

Jul 2022 – Jul 2024

Zeta Softwares, India

- Developed enterprise HR management applications for multiple business clients.
- Built database-driven reporting solutions and maintained production applications.

Technologies: C#, ASP.NET, SQL Server, Crystal Reports, HTML, CSS, Javascript, TypeScript

Software Developer

May 2017 – Jun 2022

OHO Software Innovation, India

- Developed hospital management systems covering billing, pharmacy, patient management, and clinical workflows.
- Built and maintained production application modules used by healthcare staff.

Technologies: C#, ASP.NET, SQL Server

Education

Master of Science in Artificial Intelligence

2024 – 2026

Jönköping University, Sweden

B.Tech in Computer Science

2013 – 2016

Calicut University, India

Diploma in Computer Engineering

2010 – 2013

IHRD, India

Academic Projects

- **TrackMate – Pallet Detection & Classification** GitHub
Classifies EUR and non-EUR pallets in warehouse images using CNN-based image classification models.
Technologies: PyTorch, ResNet50, EfficientNetB0, MobileNetV2
- **Warehouse Robot Navigation** GitHub
Q-learning agent that learns efficient routes for autonomous warehouse navigation.
Technologies: Python, Q-Learning, NumPy, Tkinter
- **Semantic Travel Advisor** GitHub
Knowledge-graph based recommendation system for personalised travel planning.
Technologies: Flask, RDFLib, SPARQL, HTML/CSS
- **PlastiSense – Plastic Waste Detection** GitHub
Machine-learning system for detecting potential water contamination from environmental sensor data.
Technologies: XGBoost, Python, Flask, Bootstrap
- **House Price Prediction** GitHub
Regression and ensemble machine-learning models for house price prediction and model comparison.
Technologies: Scikit-Learn, XGBoost, Pandas
Full write-ups and additional projects at: jobsy-dev.github.io

Additional Information

Technical Interests: Computer Vision, Generative AI, Multimodal AI, Deep Learning, Applied Machine Learning, Image Retrieval

Languages: English (Professional), Swedish (Beginner), Malayalam (Native)
